

## **REMARKS**

Claims 1-18 are pending in the present application. Claims 1-18 were rejected under 35 U.S.C. §103(a) as being unpatentable over Tuli (U.S. Publication 2004/0139208) in view of Brisebois et al. (U.S. Patent 6,219,679).

Regarding the Examiner's rejection of independent Claims 1 and 8 under §103(a), the Examiner states that Tuli in view of Brisebois et al. render the claims obvious.

Tuli discloses a system that allows multiple users operating a personal digital assistant (PDA) receiving information from a server via a cellular phone to access the Internet or World Wide Web (WWW) to view and interact with these pages remotely. Tuli further discloses that a Web server is connected to the Internet and converts an image of a Web page into a bit map format which is compressed and then sent via the cellular phone to the PDA. In other words, the PDA displays a bit map image of a part of a Web page. As taught by Tuli, the PDA does not interact directly with the Web page but is fed a bit map image with which the PDA responds. This can cause unnecessary delays and does not allow direct interaction with a Web page when the PDA is not wirelessly connected to the Web server.

Brisebois et al. discloses enhanced user-interactive information content bookmarking.

With respect to the argument presented in the previous Response that as taught by Tuli, the PDA does not interact directly with the Web page but is fed a bit map image with which the PDA responds, the Examiner stated that this feature is not recited in the claims.

Claim 1 recites, "displaying the web page"; Claim 1 does not recite, "displaying an image of a web page". Therefore, Claim 1 does recite that the mobile terminal interacts with the web page and not an image of the web page.

Claim 8 recites, "loading a web page"; Claim 8 does not recite, "loading an image of a

web page". Therefore, Claim 8 does recite that the mobile terminal interacts with the web page and not an image of the web page.

Brisebois et al. discloses creating a specific area on each of a plurality of web pages, including the created specific areas in a display window and generating a super-bookmark page. Referring to Figs. 5a ~ 5b, Brisebois et al. selects/creates A, B, C, D, and E from five web pages and locates A, B, C, D, and E at a proper portion of a "new super-bookmark window" of Fig. 5b. At this time, the (X, Y) coordinates of each area on the new super-bookmark in Fig. 5b as well as the URL of the web page corresponding to each area are stored, and then the new super-bookmark is generated. In addition, when the generated new super-bookmark page is displayed, A, B, C, D, and E are selected and the corresponding web page is connected and provided to the user.

Col. 4, lines 8~39 and col. 4, line 62~ col. 5, line 13 of Brisebois et al., cited by the Examiner, disclose that when the selected A, B, C, D, and E area are located at a proper point of the new super-bookmark window, the (X, Y) coordinates of each area are stored together with the URL address. However, Brisebois et al. fails to disclose that a previous display information includes a start position, wherein the start position is a position of a display area of a re-visited web page and corresponds to the position of the display area of a web page shown at a time of termination, as disclosed in the claims of the present application. Tuli does not cure these defects.

Based on at least the foregoing, withdrawal of the rejections of Claim 1 and 8 is respectfully requested.

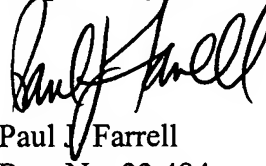

Independent Claims 1 and 8 are believed to be in condition for allowance. Without conceding the patentability per se of dependent Claims 2-7 and 9-18, these are likewise believed to be allowable by virtue of their dependence on their respective amended independent claims. Accordingly, reconsideration and withdrawal of the rejections of dependent Claims 2-7 and 9-18 is respectfully requested.

Accordingly, all of the claims pending in the Application, namely, Claims 1-18, are

believed to be in condition for allowance. Should the Examiner believe that a telephone conference or personal interview would facilitate resolution of any remaining matters, the Examiner may contact Applicants' attorney at the number given below.

Respectfully submitted,

A handwritten signature in black ink, appearing to read "Paul J. Farrell", written over the typed name.
